The improved antibody is used for rapid targeting markers of anglogenesis, for detecting diseases characterized by vascular proliferation, such as diabetic retinopathy, age-related macular degeneration or tumours. The antibody localizes the respective tissue within 3 to 4 hours after injection. It is used in immunoscintigraphic detection of angiogenesis and for diagnosis and therapy of tumours and diseases characterized by vascular proliferation. The antibody can be conjugated to a molecule which induces blood coagulation and blood vessel occlusion. These conjugates are used in the preparation of injectable compositions for the treatment of angiogenesis and the antibody can be conjugated as a conjugated are used in the preparation of injectable compositions for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents the VH component of a modified human scFV antibody which has specific affinity for a characteristic epitope of the ED-B domain of fibronectin. The affinity of the antibody for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an antibody with specific affinity for a characteristic epitope of the ED-B domain of fibronectin, where the antibody has improved affinity to ED-B. The invention also relates to conjugates comprising antibodies with a suitable photoactive molecule useful in the detection and/or coagulation of blood vessels. An antibody with improved affinity to the ED-B domain is useful for diagnosis and therapy of tumours and diseases characterised by vascular proliferation, cancer, rheumatoid arthritis, neo-vasculature associated ocular comprises the injection of conjugates comprising antibody and a molecule capable of inducing blood coagulation and blood vessel occlusion. The present sequence is single-chain variable antibody fragment (scFV) L19 antibody variable heavy chain (VH) region related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        by vascular proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          An antibody with improved specificity for fibronectin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC has specific affinity for a characteristic epitope of the ED-B domain CC of fibronectin. The affinity of the antibody for this epitope was CC improved by introducing a number of mutations in the complementarity C determining region (CDR) residues located at the periphery of the CC binding site. The improved antibody is used for rapid targeting markers CC of angiogenesis, for detecting diseases characterized by vascular CC degeneration, such as diabetic retinopathy, age-related macular CC within 3 to 4 hours after injection. It is used in immunoscintigraphic detection of angiogenesis and for diagnosis and therapy of tumours and CC conjugated to a molecule which induces blood coagulation and blood CC vessel occlusion. These conjugates are used in the preparation of CC pathologies, especially caused by or associated with ocular CC candidness.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to polynucleotides encoding novel human CC proteins or their active domains. The polypeptides, polynucleotides and CC antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant CC protein expression or activity. The polypeptides can be used as CC The polypeptides are used to identify compounds which bind to the CC primers, for sequencing, for chromosome or gene mapping, in the CC primers, for sequencing, for chromosome or gene mapping, in the CC primers, for sequencing, for chromosome or gene mapping, in the CC primers, for sequencing, for chromosome or gene mapping, in the CC protection of recombinant proteins, and in generating anti-sense DNA or CC target drugs to a tumour, in assays to determine biological activity, to CC protein levels, as tissue markers, and to isolate receptors or ligands. CC contraceptives of the invention may also be useful in treating plands. CC disorders, stem cell disorders, regenerating bone, cartilage, tendon, the proliferation, differentiation and survival of stem cells, as a CC contraceptive, treating osteoarthritis, anaemia, CC scherosis, stroke, immune deficiencies resulting from bacterial, viral or fungal infection or from autoimmunity, cancer, altergy, asthma, CC graft-versus-host disease, eczema, haemophilia, thrombosis, and infection.

The present sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

CC The polypeptides are used to identify compounds which bind to the

CC polypeptides. Polynucleotides of the invention are used as probes and

CC primers, for sequencing, for chromosome or gene mapping, in the

CC production of recombinant proteins, and in generating anti-sense DNA or

CC RNA and in gene therapy. Polypeptides of the invention can be used to

CC raise antibodies/elicit an immune response, to determine duantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC raise antibodies/elicit an immune response, to determine quantitative

CC rigament and/or nerve tissue, wound healing, treating burns, promoting

CC ilgament and/or nerve tissue, wound healing, treating burns, promoting

CC contraceptive, treating osteoporosis and osteoarthritis, anaemia,

CC contraceptive, treating osteoporosis and osteoarthritis, anaemia,

CC contraceptive, parkinson's and Huntington's diseases, amylotrophic lateral

CC sclerosis, stroke, immune deficiencies resulting from bacterial, viral or

CC fungal infection or from autoinmunity, cancer, allergy, asthma,

CC anti-inflammatory diseases, nervous system disorders, and infection.

CC The present sequence represents a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as protein expression or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 4; Page 577; 894pp; English.

Detecting fibronectin isoform B in body fluid of an individual, by binding fibronectin to gelatin on solid support, and determining ability of specific binding member for Extra Domain B to be retained support -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (PHIL-)
(CAST/)
(ZARD/)
                                                         for quantitating the amount of an insoluble marker protein in a sample of tissue or tumour; for determining the grade or severity of neoplasia in a sample of tissue or tumour. An elevated level of B-FN in a body fluid such as plasma, cerebral-spinal fluid or cystic fluid obtained from an individual is indicative of the presence of a tumour in the individual. The methods are useful in diagnostic and prognostic individual. The methods can be readily applied to small biopsy samples situations. The methods can be readily applied to small biopsy samples obtained in the clinic, thereby providing valuable information without additional compromise to the patients or complications for the clinicians. The present sequence represents the VH domain of a B-FN ED-B specific binding antibody molecule, which is used in the exemplification
                                                                                                                                                                                                                                                                                                      The present invention describes a method for detecting the presence of fibronectin isoform B (B-FN) in body fluid of an individual. The method involves passing the fluid over a solid support (SS) to which gelatin that binds FN is attached, such that if FN is present, it is retained on SS by binding gelatin, and determining the presence of B-FN on SS by determining the ability of a specific binding member for extra domain B (ED-B) of B-FN to be retained on SS. The method is useful for the grantitative determination of B-FN in a body fluid taken or collected quantitative determination of B-FN in a body fluid taken or collected grantitative in the amendation of B-FN in a sample from an individual. Other methods from the present invention can be used:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Castellani P,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The specification describes a method for screening for functional C polypeptides which bind a ligand. The method comprises contacting a crepertoire of polypeptides with a generic ligand, and then screening selected functional polypeptides with a target ligand. The method comprises contacting a contacting and then screening selected functional polypeptides with a target ligand. The method comprises the removal from a chosen repertoire of polypeptides, those compression of the introduction of the introduction of the compression of the compre

The present invention describes a dual-specific ligand (I) comprising:

CC (a) a first single immunoglobulin variable domain with a binding

CC specificity to a first antigen or epitope; and (b) a second complementary

CC immunoglobulin single variable domain with a binding activity to a second

CC antigen or epitope. The binding domains are mutually complementary, and

CC the first and second domains lack mutually complementary domains that

CC share the same specificity. (I) has cytostatic, anti-HIV, antianaemic,

CC antiinflammatory, immunosuppressive and neuroprotective activities. The

CC diseases, e.g. cancer, HIV infection, hepatitis, rubella, anaemia,

CC inflammations or autoimmune disorders (e.g. multiple sclerosis, Crohn's

CC diseases or myasthenia gravis). The dual-specific ligand may be used to

CC recruit cytotoxic T-cells to a cancer cell. The dual-specific ligand is

CC also useful for monitoring the efficacy of drugs, as well as for

CC also useful for monitoring the efficacy of drugs, as well as for

CC also where the present sequence represents a human serum

CC albumin (HSA) related antibody sequence, which is used in an example

                                                                                                                                                                                                                                    antibodies raised against the polypephiums are used in all the contract of a mammal and prevention of disorders caused by the aberrant CC protein expression or activity. The polypeptides can be used as CC molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the CC primers, for sequencing, for chromosome or gene mapping, in the CC primers, for sequencing, for chromosome or gene mapping, in the CC production of recombinant proteins, and in generating anti-sense DNA or CC RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to CC target drugs to a tumour, in assays to determine biological activity, to CC target antibodies/elicit an immune response, to determine quantitative cC protein levels, as tissue markers, and to isolate receptors or ligands. CC protein levels, as tissue markers, and to isolate receptors or ligands. CC disorders, stem cell disorders, regenerating bone, cartilage, tendon, CC disorders, stem cell disorders, wound healing, treating burns, promoting CC ligament and/or nerve tissue, wound healing, treating burns, promoting CC alzheimer's, Parkinson's and Huntington's diseases, amylotrophic lateral CC contraceptive, treating osteoporosis and osteoarthritis, anaemia, CC graft-versus-host disease, eczema, haemophilia, thrombosis, and infection. CC The present sequence represents a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in an objective structure sample containing a protein group in high efficiency, comprising reacting an objective structure sample containing a protein group or a portion containing an objective protein in the sample with an antibody library, recovering the antibody combined with the protein, replicating the recovered antibody and reacting it with the objective protein at least once. The method is used for the identification of an objective protein. The present sequence is an antibody chain (derived from the DP47 heavy chain, the DPK22 light chain) used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for screening an antibody, comprising performing 2-D electrophoresis on plural proteins in a sample individual protein spots are separated by reacting them with an antibody library and then replicating the bound antibodies before reacting them with the spot proteins again. The method is useful for screening an antibody specific for a target protein, e.g. from a phage antibody library, which is useful in proteomics for studying various protein and complementary decayribonucleic acid (cDNA) expression libraries as well as gene functions, and in other biological and medical sciences. This sequence is a protein relating to the antibody screening method of the

Such antibodies or functional fragments can be used as immunoactivators, anti-tumour agents, immunosuppressants, and as remedies for autoimmune diseases, allergy or coagulation factor VIII inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

cor an antigen binding molecule; and (b) immunologically minics the conformation dependent, and has an immunologically minics the conformation-dependent, and has an immunologically minics the conformation-dependent, and has an immunologically minics the conformation-dependent and has an immunologically minics the conformation of amino acids. (1) is used in the form a specific spatial conformation of amino acids. (1) is used in the form a conformation of mino acids. (1) is used in the form a conformation of an analysis which are not proteins or periodes, as defined above but which have epitopes which show an accorresponding vaccine (V2) against antigens which are not proteins or peptides, as defined above but which have epitopes which show an accorresponding vaccine (2) preparing (V1) and (V2); (3) human and conformation epitope antihology fragments against the MUC1-conformation epitope antihology fragments against the MUC1-conformation epitope antihology one of 31 approximately 60 residue amino acids sequences, all fully in the specification; (4) MUC1-conformation epitope mimics and sequences of 69-17 residue amino acid sequences, all fully in the conformation one of 52 7-13 residue amino acid sequences, all fully defined in the specification; (6) TF carbobydrate epitope mimics conformation; and (7) DNA sequences and fully defined in (2) the specification; and (7) DNA sequences and (2) are used to treat concer, and infectious diseases, e.g. caused by prions, viruses, bacteria and parasites. The vaccines are effective in cases where vaccination has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             encodes a region of an antiidiotypic antibody (Ab2) or another peptide which: (a) specifically binds to the binding site of an antibody (Ab1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    conformation-dependent antigens (CDA) comprising antibody, or peptide which immunologically imitat

                                                                                                                                       ₽
                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                          The invention relates to a novel purified preparation of a human CC antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) CC and neutralises a matrix metalloprotease (MMP)-inhibiting activity of CC TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and CC invention has hepatotropic, cytostatic, nephrotropic and cardiant CC invention has hepatotropic, cytostatic, nephrotropic and cardiant CC activity. The human antibody is useful for decreasing an MMP-inhibiting CC symptoms of a disorder in which TIMP-1 is eleverating the CC symptoms of a disorder in which TIMP-1 is elevated, e.g. liver CC syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic CC succest. The antibody is also useful for detecting a TIMP-1 in a test corporation, or in diagnosing a disorder in which a TIMP-1 level is clevated. The sequences shown in ABRO1502-ABRO1545 represent the heavy cxx chain regions of a human anti-TIMP-1 antibody of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
